DETAILED ACTION

Claim Objections

1. Claim 33 is objected to because of the following informalities: "in trench" should be replaced with --in a trench--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 33 and 35-37 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Vo U.S. Patent 5,097,381A.

Vo discloses an integrated capacitor formed in a trench having a width of no more than about 0.25 micrometers, a depth of greater than about 7 micrometers and an aspect ratio greater than about 20:1 (see column 5, lines 35-45), comprising; a dielectric layer 54 lining the trench; and a conductively doped polysilicon layer 52 (see column 5, lines

20-30) filling the trench. The trench is formed in a semiconductor substrate 40 (see Abstract).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 34 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vo U.S. Patent 5,097,381A in view of Mazuré et al..

Vo is applied as above but lacks anticipation on disclosing arsenic as an impurity comprised in the doped polysilicon. Mazuré et al. discloses using an arsenic doped polysilicon plug for a trench capacitor. In view of this disclosure it would have been obvious to a person having ordinary skills in the art at the time the invention was made to disclose arsenic as an impurity comprised in the doped polysilicon as disclose in Mazuré et al. in the primary reference of Vo because arsenic is a conventional impurity used to dope polysilicon in capacitor fabrication procedures.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Malhi, Harmon et al. Kermani et al., Ozaki, Economikos et al. and Sugiura et al. inventions are related to high aspect ratio trench capacitors.
